## FAQ

### **Q1: What are the system requirements for the CCS C compiler?**

A1: The system requirements vary depending on the version of the CCS compiler. Generally, you'll need a reasonably modern computer with sufficient RAM and disk space. Check the official documentation for the specific requirements of your version.

### **Q2: Is the CCS compiler free to use?**

A2: CCS licensing has changed over the years. Currently, Microchip's MPLAB XC8 is the recommended compiler for PIC microcontrollers and it offers various licensing options, including free versions for non-commercial use. Check the Microchip website for details. The original CCS compiler may be found through third-party sources, but its legality and support are uncertain.

**Q3: How do I choose the correct header file for my PIC microcontroller?**
